Corporate Tools Hiring Team

Re: Front-End Web Developer

Dear Corporate Tools Hiring Team,

I'll admit your job posting is the first one that's made me laugh and immediately want to apply in the same breath.

"Hates the standard themes that come from a site-builder tool and instead likes crafting your own themes from scratch" could have been lifted straight from my own resume. It's exactly the kind of work I gravitate toward, and exactly what I've spent the last several years doing.

For the past five-plus years I've worked as the sole front-end developer supporting 20+ live production WordPress sites, which means I'm comfortable owning a build end-to-end: PHP, JavaScript, HTML/CSS, and Git are the daily toolkit, and I regularly extend functionality past what any page builder can do on its own. My redesign of **Konfluence.org** is a good example, a fully custom-built layout with no template or starter theme, including in-page PDF readers I built so visitors could access scientific papers directly on the site. I also bring hands-on React experience from building UI features for a healthcare scheduling application, so I can move comfortably between WordPress theming and component-based front-end work.

Working as a sole developer has also meant driving UI/UX decisions without a design team looking over my shoulder, and keeping accessibility, performance, and cross-browser reliability front of mind by default rather than as an afterthought. I haven't worked in Vue, Confluence, or Jira specifically, but I've consistently picked up new tools and frameworks quickly on the job, and I don't expect that to be any different here.

I'd welcome the chance to talk through how my background fits what you're building at Corporate Tools. Thank you for considering my application, and I look forward to hearing from you.

Sincerely,

Catalina Williams
